

Backup as a service

Giving you a level of security and flexibility with reliable, automated back-up solutions.

about the service

Is your business ready to tackle unforeseen obstacles? Business continuity solutions have become the most sought-after answer for organisations. Increasingly, businesses are relying on secure and efficient cloud-based solutions to store their valuable data. However, disasters like hardware failure, natural disasters, or cyber-attacks can jeopardise this data. In the event of an attack like this, natural or otherwise, an organisation may find itself unable to recover. That's where Back up as a Service (BaaS) comes in. BaaS has gained significant popularity in recent years as a reliable and effective solution.

how it works

Our Back Up as a Service is essential for any business looking to protect its valuable data. We provide a reliable and automated backup solution which offers your organisation a level of security and flexibility that you need. With our service, you can rest easy knowing that all your essential data is backed up and can be quickly restored in case of a crisis. This means you can focus on what really matters - your core operations. Using our BaaS, our experts will ensure the risk of data loss is reduced for your organisation alongside helping you to maintain data compliance. We will provide a cost-effective data backup and recovery solutions tailored to your business goals and needs.

key benefits

Security

Our BaaS service safeguards your data by duplicating them in a secure, off-site location for easy access and protection against any compromise.

Cost savings

In the event of an attack, using our BaaS will save you money from having to unexpectedly replace your entire IT infrastructure including data or hardware.

Simplicity

Our BaaS allows you to quickly restore everything back to normal with a few clicks instead of a lengthy process that would eat into your business' downtime.

Continuous improvement

When using our BaaS, you will have access to test the speed of restoration so that you can improve or make changes minimising any interruptions for your teams and customers and ensuring your plan is always up to date.

Reliability

Our BaaS is constantly replicating your data and files so that any restoration for your organisation's IT infrastructure will be seamless, not missing a day's worth or an hour's worth of data which could be critical within your industry.

features

User authentication

Our BaaS provides you with the security of strong authentication for your users so that only authorised personnel can access your most sensitive data.

Regulatory

Our experts provide comprehensive reporting and auditing capabilities to support compliance requirements and regulatory mandates so that your organisation is always fully compliant with any regulatory standards whilst the service is being used.

Bespoke

We give you a flexible and scalable plans aligned to your business requirements and storage capacity which can be easily adjusted as your data needs grow over time to ensure you have sufficient capacity for your evolving needs at any one time.

Disaster Recovery

Using BaaS protects your data from a disaster by duplicating into its own data centre. However, we ensure that the BaaS data centre we use to store your data is also safe if a disaster occurs to the data centre also.

Automated Backup

Our BaaS automatically backs up data from your on-premises servers, workstations, or cloud environments to secure off-site storage that we provide ensuring that your critical data is regularly and consistently backed up without requiring manual intervention, reducing the risk of data loss due to human error or system failures.

Flexible Recovery Options

We can give you flexible recovery options to meet various recovery time objectives (RTOs) and recovery point objectives (RPOs), whether it's restoring individual files, folders, or entire systems, allowing you to quickly recover data, minimise downtime and ensuring business continuity in the event of data loss, corruption, or disaster.

why you need it

- You are looking for a business continuity solution to protect your organisation.
- You want to protect your organisation's data against any disasters, natural or cyber.
- You're looking for a reliable automated back-up solution to give your business security.
- You want to adopt a flexible, cost-effective back-up solution that can be used long-term as your business changes and grows.
- You're looking for a back-up solution that reduces downtime, avoiding disruptions to your business operations so that you can continue to focus on your core operations.
