

Microsoft Azure service

Helping you grow with greater efficiency and responsiveness to change including readiness assessment, design, implementation, support, site recovery, back up, app testing and more.

about the service

Microsoft Azure helps organisations grow with greater efficiency and be more responsive to change. It's an open, secure, and flexible cloud platform that enables you to quickly build, deploy and manage applications and/or solutions, which are then hosted on Microsoft's global network of managed datacentres. With a cloud platform such as Azure, you can save space and money for your organisation as it's designed to be more secure, flexible, and reliable than on-premises servers. It can be up and running quickly, scale up or down as needed, and avoid high capital costs by only paying for what you use. They eliminate the expense of setting up and running your own on-site datacentres and give you access to computer resources you need in real-time to match the needs of your business.

how it works

Being a Tier 1 Microsoft Cloud Service Provider, we can provide you with the guidance and assistance you need so that you can get the most benefit from Microsoft's Azure services. We can assess the status of your web applications, portfolios, and SQL server database to see which are ready to be migrated and which will need additional configuration. Our assessment also includes what the estimated capacity will be to run your applications on Microsoft Azure, along with any guidance and advice that's tailored for your environment. Alongside the assessment, our Azure service includes Azure design, implementation and support, site recovery, back up, application testing and IaaS.

key benefits

Security

Azure's approach to security, compliance and privacy is unique in comparison to other cloud providers. Azure features a highly-secure cloud foundation that takes advantage of multi-layered security provided by Microsoft.

Cost Effective

You can control your usage and only pay for what you use, which provides you with convenience and cost-control that's not always possible with on-site infrastructures. Microsoft Azure works with your business and grows with you, as well as helping reduce the cost of hiring highly skilled, but expensive, IT professionals, as it can automate many of the basic processes required to build a software solution or app.

Automation

Azure removes mundane tasks such as storage backup, updating server firmware, maintaining Operating Systems and security patches, further reducing the human resources required for IT, but it can also free up existing IT professionals to concentrate on creating solutions to help grow your company and meet strategic business goals by having a hosted cloud solution.

features

Virtual Machines

Microsoft Azure VM gives you a simple and effective way to get the benefits of the cloud without having to make significant changes to your applications.

Cloud Services

We can help scale your applications in minutes with Azure cloud services, as well as create a staging and testing environment to minimise downtime for your customers.

Azure Active Directory (Azure AD)

A complete identity and access management cloud solution that provides you with a robust set of capabilities to manage your users and groups. It helps secure access to on-premises and cloud applications.

Backup

Microsoft Azure Backup is a reliable, cost-effective option for backing up your data to the cloud. Azure Backup encrypts and protects your backups in offsite cloud storage with Microsoft Azure, adding a layer of protection in case data loss or disaster impacts your servers.

Azure Site Recovery (ASR)

Azure Site Recovery (ASR) provides Disaster recovery as a Service (DRaaS) by replicating your Hyper-V, VMware, and physical servers to the Azure Cloud. You can use site recovery as a failsafe for your entire IT setup if your main site is struck by a disaster.

SQL Database

You can scale performance on demand and reduce downtime to your databases with SQL Database as a service.

why you need it

- You want to bring a 'stamp of credibility' to your business to give you a competitive advantage.
- You are looking to save capital and operational expenditure by removing the need for infrastructure investments.
- You want to reduce the space, power and electricity costs that would be needed to maintain racks of servers.
- You want access to affordable, scalable, flexible, and agile enterprise-grade IT capabilities.
- You'd like to help grow your business with greater efficiency and be more responsive to change.
- You are looking to begin your organisation's journey with Cloud but aren't sure where to start.

other useful services

Microsoft 365 Services

The ideal first step to Cloud computing bringing together all the familiar Microsoft Office applications in a way that is easy to use and accessible anywhere.

Microsoft SharePoint Services

Providing secure access to internal sites, documents and other info allowing you to share and collaborate more easily with clients, colleagues and partners.

Cloud Transformation Services

Modernising and optimising your data management, giving you the freedom to work unrestricted with the power of digital transformation for enhanced agility.
