

# SaaS Protection Service

Advanced Backup and Data Protection for Microsoft 365.

## the challenge

Businesses relying on Microsoft 365 for daily operations often assume its built-in recovery tools are sufficient for data protection. However, Microsoft recommends third-party backups to recover from issues like ransomware attacks, data loss and accidental deletions. Relying solely on native tools can lead to significant challenges, including incomplete data recovery and prolonged downtime.

Backing up your data three times daily and storing it on a secure, private cloud platform ensures that business-critical information is protected, accessible, and compliant with regulatory requirements.

## key business outcomes:

### Reduced Downtime:

Recover from data loss events quickly with advanced restoration tools.

### Improved Compliance:

Meet GDPR, ISO, and SOC2 standards with secure encryption and robust data retention policies.

### Improved Security:

Protect data from ransomware and malicious activities with regular, automated backups.

### Operational Efficiency:

Minimise IT resource demands by automating backups and centralising data protection.

### Peace of Mind:

Ensure critical business data is consistently backed up and recoverable.

## why choose us?

**Proven Expertise:** Trusted by businesses to deliver reliable and secure data protection solutions.

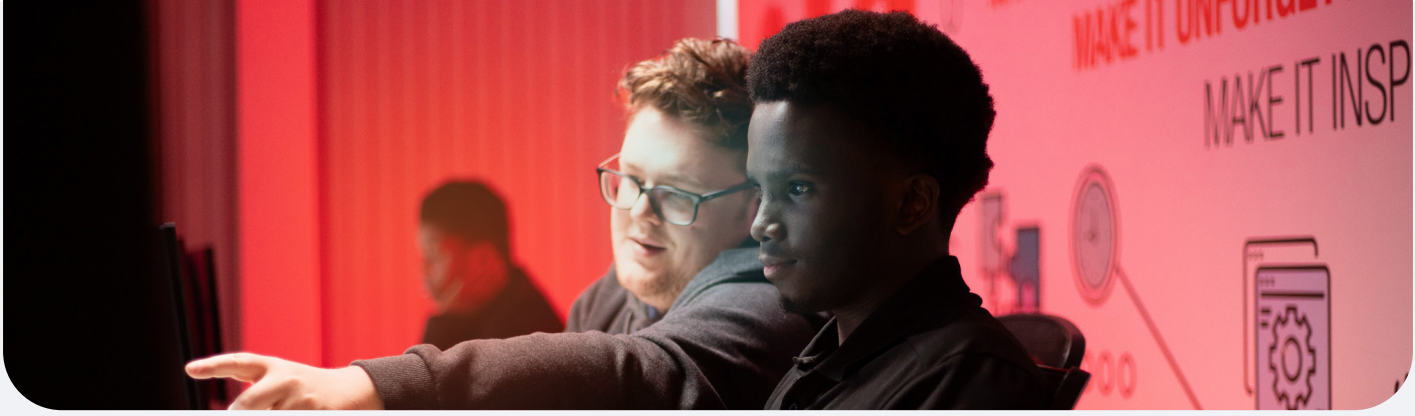

**Client-Focused Support:** Tailor backup and retention policies to your specific compliance and operational needs.

**Customised Approach:** Tailor backup and retention policies to your specific compliance and operational needs.

"If you're looking for IT Support, you need a company that listens to its customers and provides solutions it needs rather than solutions it believes you may want – we have found Aztech do that."

Alan Clarke, Financial Director (MiniClipper Logistics)

## service overview

Aztech IT's SaaS Protection Service provides an independent, comprehensive backup, restore and export solution tailored for Microsoft 365 applications, including Exchange, OneDrive, SharePoint, and Teams. Our solution frees your IT teams to focus on strategic tasks, knowing your data is secure.

Aztech IT's SaaS Protection Service combines powerful features to safeguard your Microsoft 365 environment:

**Automated Backups:** Perform backups three times daily to ensure data consistency and minimal loss.

**Private Cloud Storage:** Securely store backups in a private cloud, ensuring protection against unauthorised access.

**Customisable Retention Policies:** Protects against internal threats by detecting and mitigating risks originating from within the organisation.

**Data Leak Prevention and Encryption:** Define data retention timelines that align with compliance requirements.

**'Set and Forget' Automation:** Automate the entire backup process, eliminating the risks of human error.

## example use cases

**Prevent ransomware losses:** Recover encrypted data quickly with secure, up-to-date backups.

**Ensure compliance readiness:** Demonstrate data retention and security for regulatory audits.

**Reduce downtime after accidental deletions:** Restore critical files or emails efficiently to maintain productivity.

## how it works:

### initial setup

Configure backup schedules and retention policies tailored to your business needs.

### automated backup process

Run backups automatically three times a day, capturing critical data changes.

### data storage

Secure backups in a private cloud with advanced encryption.

### restore and export

Access simple tools to restore or export data as needed for operational or compliance purposes.

### ongoing support

Provide continuous monitoring and support to address evolving data protection requirements.

## take action today

Secure your Microsoft 365 environment with Aztech IT's SaaS Protection Service. Call 0330 0949 420 or email [info@aztechit.co.uk](mailto:info@aztechit.co.uk) to learn how we can safeguard your business-critical data and enhance your operational resilience.
