

SaaS Protection service

Providing an advanced independent all-in-one backup, restore and export solution to avoid common data loss pitfalls.

about the service

With more and more businesses relying on Microsoft 365 to run their daily operations, there's a need for more advanced backup and data protection than what Microsoft can provide. There is a misconception that Microsoft provides sufficient backup, but this is not the case. Microsoft recommends that you need a third-party backup as the only way to recover from data loss associated with ransomware encryption. Whilst Microsoft 365 does offer the basic restoration capabilities for your organisation, there is two major issues that arise when using their tools: lost data & lost time. An independent data backup solution separated from the app itself is necessary to avoid the most common data loss pitfalls.

how it works

Our Software as a Service (SaaS) Protection for M365 provides a more advanced all-in-one backup, restore and export solution which will cover your M365 Exchange, OneDrive, SharePoint and Teams.

We provide you with our independent data backup solution for your M365 portfolio which is separated from the app itself to avoid these common data loss pitfalls. Our service backs up your portfolio 3x a day and gives you the option to store an unlimited amount of data in a private and purpose-built Cloud platform. The platform is accessible to you anywhere in the world.

key benefits

Reduces time

Using our SaaS Protection for M365 your IT teams will be able to reduce the time they spend on configuring backups for your business and focus on strategic initiatives to support your business goals.

Compliance

Our service ensures your business is compliant with all major standard encryption requirements.

Peace of mind

With the service backing up your data 3x a day it gives you peace of mind that your most critical data is protected in the event of a data loss.

Security

SaaS protection backs up your M365 data onto a secure Cloud platform which improves on native platform data recovery capabilities.

features

3x Daily Back Ups

SaaS Protections safeguards against harmful ransomware or malicious activity throughout any given day with 3x daily backups reliably protecting your business data.

Private Cloud

The SaaS Protection service operates within a secure private Cloud which protects your data from its source to the backup destination.

Standard Encryption

The service uses government standard encryption methods which ensure all major compliance requirements (including GDPR, ISO, SOC2, etc) are fulfilled.

Automation

The methodology of the service is based around a 'set & forget' mentality which means that we set the backups to run automatically removing the chance of human error.

Data Retention Policies

Our SaaS Protection service allows you to define customisable data retention policies to meet your specific compliance and retention requirements, ensuring data is retained for the required duration while adhering to regulatory mandates and industry standards.

Security and Compliance

Our SaaS Protection service includes robust security features to safeguard backed-up data against unauthorised access, data breaches, and cyber threats, helping you to protect sensitive data, maintain data integrity and confidentiality.

why you need it

- You use M365 as a business and are looking for suitable backup protection for your portfolio.
- You're looking for a way to combine a backup solution for M365 with restoration and exporting.
- You want peace of mind knowing your critical M365 data is backed up regularly.
- You want to ensure your business environment is compliant.
- You want to free up your IT teams to focus on strategic tasks to drive growth for your business.
